vacuum pump

Vacuum Canister *Freshield*

How to use

Canister vacuum

1 Check both side locks on the side of lids are properly closed before pump the air out.

2 Fit the hand pump in the round shaped well and start to pump the air. Pumping gets harder and eventually it does not pull up. Check the lids vacuum sealed.

Release air by pushing side of silicon button in the centre of the well and air comes out with whistle sound.

Frequently Asked Questions

HOW TO USE FRESHIELD VACUUM CANISTER BETTER ?

- 1.Place lid on the canister. Make sure both locks on the side of lid are properly closed.
- 2.Place and fit the hand pump on the centre of the lid as shown in the picture and start to pump.
When there is no more air in the canister, the pump handle will not pull up.
- 3.Check that the canister & lid are completely sealed.
- 4.How to release vacuum?
:push the Grey silicon button side to release air

Q1 What if the seal does not feel tight and doesn't vacuum after a while?

A1 Check both side locks on the side of lids are properly closed before pump the air out.
If the lid was not closed, air will leak out during the pump process. Or Check the silicon button on the lid is in proper position: turn it till it moves freely.

Q2 How I do know it is vacuumed?

A2 Pumping gets harder and eventually it does not pull up. Check the lids vacuum sealed.

Q3 How to wash vacuum Container without scratching?

A3 Dishwasher safe or use soft wash cloths when hand-washing.

Q4 What if the inner cap on the lid is missing?

A4 It doesn't affect vacuuming but get a replacement from us at anytime. Phone or e-mail.

Q5 Are they Microwave, Freezer safe as well?

A5 Yes they are. For microwave use, remove the button & inner cap on the lid for ventilation.

Q6 Are they impact proof even if in frozen?

A6 The containers are very strong (will almost never crack or break) but the lids and trays are not quite as strong as containers. Avoid dropping when frozen.
